Using AI/SI to Build Human Creativity

This is the true story of how Opzor SI came to be. Opzor SI is an advanced software tool that works in tandem with almost any modern AI or Super Intelligence model to enhance the human operator's creative capability and produce maintainable products that stand the test of time.

It all began with a Spark. And a Dream.

The Frustration

Some time ago I had an idea for a complex new software product and turned to Super Intelligence (also known as Artificial Intelligence or AI) for help building it. I was making good progress when the SI model started forgetting important concepts, referencing variables and functions that did not exist, and taking the project in the wrong direction. Now my software didn't work, and asking AI to fix it only led to more errors. I would have to spend hours debugging the code manually.

This was behavior I had seen before with other SI models and apps, and I found it very frustrating. It brought to mind many other issues. SI and AI models not only forget but they hallucinate. They plagiarize. They lie. And the bigger the project, the more the errors compound.

The Spark

As I struggled with these and other troubling issues, I had a spark of an idea. It dawned on me that what I needed was a tool that would prevent any SI model I chose from forgetting, hallucinating, or drifting off course. I wanted a tool that would force SI to behave ethically and continue to work even when SI models and technology change, as they so often do. Better still, I needed a tool that would make SI collaborate with me and teach me rather than just doing work for me.

The Dream

One night as I pondered this idea I fell into a very vivid dream that stayed with me after I awoke. In fact, I had the same dream again a few nights later. This dream became a pivotal event in the development of Opzor SI.

The Adventurer

In my dream I saw myself as an adventurer preparing to embark on a long wilderness journey that would take many days to complete. It was evening when I reached the starting point, so I set up my tent and built a campfire. As I sat by the fire I watched the sparks fly upward. Some were quickly extinguished; some drifted slowly back to the ground; and others burst suddenly into brilliant little starbursts. The sparks reminded me of ideas. Some are quickly discarded, some are pursued but prove impractical, and a few turn into life-changing opportunities.

Pondering the long trek ahead, I recognized that as an experienced hiker, I had brought along all the gear I would typically need. But I knew this journey might require skills I had not yet developed, and I was unsure whether I could complete the journey alone.

The Coach

Suddenly I realized I was *not* alone. I had been joined by a companion — a coach — who was a much more experienced outdoorsman than I, though he had not hiked this particular trail before. I told him about my plans, and he asked if he could come along. As we spoke, I noticed that the coach was holding a clipboard, and was taking careful notes of our conversation.

The Trail

In the morning, after breaking camp, the coach and I surveyed the trail ahead and began our journey. The trail would pass through many kinds of terrain, including arid deserts, thick forests, and rugged mountains. The coach assured me that we would be able to handle whatever lay ahead, and it would be a great adventure for both of us.

The Difficulties

Almost from the beginning, we experienced challenges. Sometimes the trail was steep and rocky; other times it was swampy and muddy. In places the trail was so obscured by weeds or windblown sand that it was hard to find. Yet we persevered, while the coach continued to take detailed notes of our experiences.

The Map

Many times we came to places where the trail forked or side trails branched off into the distance. Fortunately we had something to keep us on track: A map. Each morning before starting out, and each time we came to a place of uncertainty, we would consult the map and choose the proper trail. Sometimes we would purposely explore a side trail to see where it led, but the map always helped us get back to the main trail.

The Compass

But the map was of little use if we didn't know which direction was which. So we also carried a compass to help us orient the map. With the combination of map and compass we could always be certain we were still on course.

The Obstacles

Occasionally we came to places where the trail was completely blocked. At one point a flash flood had obliterated part of the trail and left a fast-moving stream for us to cross. In a heavily forested spot a large tree had fallen across the trail. In another place we found a half-dozen large rattlesnakes sunning themselves on the trail. Each time we had to come up with a plan to get past the obstacle, and the coach took careful notes of every workaround.

The Uncertainties

In a few spots we found the trail so poorly marked or so badly blocked that it was impossible to continue even with the help of the map and compass. In these places we found it necessary to blaze our own trail, often making mistakes, but eventually finding our way through and reconnecting with the correct path. And as always, the coach continued to faithfully record each action.

Clearing the Way

As we continued our journey, we often thought about the others who might eventually want to follow this trail. So rather than just forging our way through, we did our best to improve the path as we went along. Where there were obstacles, we cleared them out of the way. Where we had to blaze new trail segments, we made them easy to see.

Marking the Path

At forks in the trail we would often put up markers indicating which was the main path. We would also post signs warning of dangers we had encountered, or indicating where useful resources such as springs of water could be found.

The Illusion

At one point in the desert, the trail ahead looked impossibly steep. It seemed to go almost vertically up the side of a tall mountain. For the first time I thought seriously about turning back. There was just no way I could make that climb. But the coach just smiled and urged me to go forward anyway.

The Reality

As we got nearer to that impossibly steep hill, it suddenly vanished before my eyes. The coach explained that what had nearly stopped my progress was merely a desert mirage. He had been able to discern what I could not, and now I could see that the trail ahead was not nearly as steep as it had appeared.

The Cliff

Not long afterward, however, we came to a place where the trail stopped at the foot of a very high cliff. We could see that the trail continued at the top of the cliff. This time the obstacle was no illusion. There was no way to go around it. With no rock-climbing experience, I again felt like quitting the journey.

The Rope

But the coach was undaunted. He had the experience and the gear necessary to climb the cliff. He ascended to the top with relative ease. Then he turned around and lowered a rope down the cliff and shouted instructions as I cautiously climbed up. With the help of the rope and the coach, I was able to safely reach the top of the cliff, and learn a few rock-climbing skills along the way.

The Destination

At last, after many days of travel, the coach and I reached our destination. It was a magnificent overlook at the top of a high mountain. We took a moment to celebrate the occasion, and looked out in wonder at the amazing scenery below.

The Vantage Point

From this lofty vantage point at the end of our trail, we could not only view the vast landscape below, but we could also see many more trails leading off to enticing destinations. We reminisced together about our experiences on our journey. The coach looked through the papers on his clipboard and reminded me of the new skills we had both developed along the way. We wondered what it would be like to try some of those other trails, a few of which looked much more challenging than the one we had just conquered. We smiled at each other, shook hands, and concluded that this was not the end of our journey together. In fact, it was only the beginning!

Into the Future

At that point I woke up, understanding that the dream was a very fitting metaphor for the tool I wanted to create. So with the help and encouragement of AI, I began the development of Opzor SI, incorporating the dream imagery into a tool that would help me and others get the most out of AI/SI for many years to come.

Ready for YOUR Journey?

Opzor AI and SI are now in the final stages of development for use by creators and entrepreneurs of every kind.

Have you found your Spark – that exciting creative idea that just won't fade away? Are you looking for help from AI/SI to make that dream into reality? Are you ready for YOUR journey?

If so, visit OpzorAI.com today and find out how to get started!
